

NEW LIGHT-RUNNING ENDURO COMPETITION ZSE CHAIN

REGINA CHAIN, in accordance to its continuous improvement philosophy, has developed for the most demanding off-road riders the new Enduro competition chain: ZSE.

This chain, available in dimension 520 with nickel plated external plates in gold color, is the result of an intense development process side by side with the world best Enduro teams. The initial aim was to create a new chain with the most efficient power transmission from the engine to wheel, reducing friction and limiting the dragging effect of the wheel while preserving the durability of the chain itself. The result is the new ZSE: the best “light-running” chain available nowadays on the market.

The new ultra-slim Z-Ring (US-ZR) geometry implemented in the ZSE chains in conjunction with the high quality of the REGINA CHAIN components such as carbon steel alloy shot-peened plates and solid bushings, provide an undiscussable reliability proven also by the choice that several OE manufacturers have made selecting the new ZSE chain as original equipment for their Enduro product range.

The outstanding lightness and the limited dimension of this narrow chain, in addition to the features described above, place the new ZSE chain as the top choice for the most demanding off-road riders on Enduro competition bikes.
